Re: Application 10/667,634 Response to Your Office Action Summary For
Dermawear.

Dear Examiner Nguyen:

Andrew Fleming Jr's design as detailed in his drawings, figure 12, features an elongated slit at the genital site which calls for a snap on device with a prophylactic. The elongated slit does not contain within itself an elastic band. Dermawear is completely different from Fleming Jr's design. Please review the physical prototype sent to your office in December of 2005.

Dermawear is an all in one medical garment; a complete wash and wear unit. Dermawear has as its feature a receptacle rim (a circular elastic band) which fits around the base of the penis offering real protection in the securement of the condom device and the Dermawear garment.

Fleming Jr's patent consist of parts that has, " a base to which the condom is fixed, and snaps on the base for snapping into receptacles on the undergarment, so that the prophylactic and base are removeable after use and replaceable". Citation: Fleming Jr's Abstract. Again, Please review the physical prototype of "Dermawear". Dermawear is simple in its use. Dermawear is convenient. Dermawear is different from Andrew Fleming Jr's design which "snaps on". Dermawear is one unit with a receptacle rim

built into the system containing loop defense strands which simulate pubic hairs. Additionally, Fleming Jr's design is incomplete as there is no covering of the upper thighs which are also exposed to skin pathogens during sexual copulation. Please review the physical prototype of Dermawear which covers the genital and thighs. Fleming's product is not in the mass marketplace.

Response: Max M. Abadi's design does not have a receptacle rim (elastic band) placed about the vaginal opening and/or vaginal canal. Abadi has an elastic band positioned about the waist. Again, Abadi's Panty Condom design at the vaginal opening does not contain an elastic band. Moreover, Dermawear is designed for men to wear. The "Panty Condom" by Mr. Abadi is designed for women. Again, Dermawear is for men. Mr. Abadi's product is not in the mass marketplace. Both inventors designs are incomplete and too complicated for convenient consumer use. Claim: I claim the receptacle rim of Dermawear, an elastic band fitted around the base of the penis, the loop defense strands simulating pubic hairs, and protection of cloth material extending down over the thighs for complete coverage during sexual copulation, as an all in one unit of Dermawear. Again, based upon the design differences which afford the consumer true protection, I ask that you patently review Dermawear's physical prototype previously submitted to your office. Thank You.

Reginald Hart
